Flood Barriers

Commercial & Industrial

King flood barriers are the solution for flood protection to doors and entrances for commercial & industrial buildings.

Our Product

Exclusive to King, a specially designed, extremely durable, Aluminium Alloy Barrier.

Key product attributes:

- No width limitation
- Choice of heights, up to maximum 2.1m
- Relatively light yet strong
- The rubber seal of EPDM won't crack or break, and is heat (160°C) and chemical resistant

Our systems are designed with convenience to the fore:

- Following installation, the system is easy to install and uninstall. Most of the parts are removable and easy to store
- The entrance and appearance of the protected building can be entirely unaffected except for a small track of 1.5cm wide which has a cover strip when the barriers are not in use, and the permanent side channels.

King distributors will receive training & support with survey and installation.
